EDUCATION

Georgia Institution of Technology — 2022 (Expected Graduate at December 2025)

- Candidate in Bachelor of Computer Science (Concentration in Intelligence and System & Architecture)
 - GPA: 3.91/4.0
 - Coursework: Object Oriented Programming, Data Structure, Design and Analysis of Algorithm Honor, Operating System, Machine Learning, Robotic and Perception, Object and Design, Computer Organization, Linear Algebra, Discrete Mathematics
 - Liang Scholarship (0.06%)
-

SKILLS

Programming: (Proficient at) React, JavaScript, Java, MySQL, Go, Python, Shell, Jenkins, Vue, Git, C++, Scrum
(Intermediate at) Pandas, Solidity, AWS, PHP, MATLAB, Linux, Node.js

Languages: English (Fluent), Mandarin (Native), Cantonese (Native)

INTERNSHIP & PROJECTS

Procter & Gamble (Guangzhou) Ltd. — Site Reliability Engineer (2024 May - August)

- Speed up codebase sync process by 90% by optimizing the Shell script and Jenkins Pipeline.
- Improve auto deployment platform (CI/CD) stability and experience through writing/modifying components in Jenkins Pipeline.
- Improve database query speed by 80% by designing SQL indexes and refining queries in Go backend services.
- Enhance reliability and user experience of the deployment version control system through frontend development in Vue.

Inkverse (Beijing) Technology Co., Ltd. — Full-Stack Developer (2022 June - July)

- Developed web service for live lookup through phone number from Redis in-memory database with MVC structures (React & Yii2)
- Raise team UI development efficiency by building customized low-code platform (Amis) components and integrating in React.

Web3 ATL Hackathon – Chainlink (Awarded Prize ~ 1000 USD) (2022)

- Created a Raffle system smart contract with a user-friendly interface using Solidity and React within a collaborative team of three
- Ensure absolute security for winner selection using Verified Randomized Numbers from Chainlink services.

Georgia Tech IT Board – Course Critique (2023 - 2024)

- Developed web service providing detail analysis for various courses using React for frontend and AWS for backend data management.
- Enhanced code clarity and reusability by implementing modularization and refining documentation within the existing codebase
- Improve data analysis accuracy through cleaning and processing MySQL datasets.

Advance Computer System Architecture Project (2025)

- Developed a cache simulator in C++ supporting multiple eviction policies for optimized performance analysis.

Android Application: College Scheduler (2024)

- Developed sophisticated backend model for efficient data management using advanced design pattern in Java.
- Developed Android Application for scheduling courses, assignments and exams for college in Android Studio with Java and xml.

Data Science Hackathon – Hacklytics (2023)

- Utilized Python Pandas library to analyze FIFA World Cup data for predicting future match goal-scoring probabilities for each country.
- Design a webpage featuring the world map using Google GeoChart with html and JavaScript for displaying the analyzed result.

Web Development (2021 - 2024)

- Developed chrome extension for blocking malicious webpages using React for frontend and JavaScript for webpage content detection
 - Led and instructed a team of four members to collaboratively build a forum website using HTML, CSS, and JavaScript
 - Constructed a dynamic website with interactive pictures and video using PHP and MySQL for database management
-

LEADERSHIP

Temperature Charity Team (Founder | Leader), The Solitudes Rock/Pop Band (Founder | Director)
